

Name: _____

Giraffes

The following paragraphs are from a report about giraffes. The paragraphs are in the wrong order.

Cut along the dotted lines and paste the paragraphs under the correct headings on the following page.

Giraffes are herbivores, which means they only eat plants. A giraffe has a tongue that can grow up to 18 inches long. They use it to grab leaves from trees. Their long legs, necks, and powerful tongues help them reach the highest leaves of tall trees.

Giraffes are mammals. They are the tallest land animals on Earth. They have long necks and legs and can grow up to 60 feet tall. Giraffes have a beautiful coat covered in brown spots. Interestingly, no two giraffes have the same pattern of spots.

Giraffes are amazing animals. Their tall bodies are perfectly adapted to suit their habitat.

Giraffes live in Africa's grasslands and open woodlands, where tall trees and shrubs provide them with plenty of food.

Did you know that giraffe babies can stand and walk around an hour after birth? They have to keep up with the herd and run away from danger.
