

Name: _____

1) Squares and rectangles have four right angles (a right angle equals 90 degrees).

a) The sum of the four angles of a square equals _____ degrees.

b) The sum of the four angles of a rectangle equals _____ degrees.

2) An equilateral triangle has three equal sides and angles. Each angle is 60 degrees.

a) The sum of the three angles of an equilateral triangle equals _____ degrees.

3) Use a protractor to measure the angles of each triangle.

a) Label the size of each angle.

b) Calculate the sum of the three angles.

Sum of the angles =

Sum of the angles =

Name: _____

4) Use a protractor to measure the angles of each quadrilateral.

a) Label the size of each angle.

b) Calculate the sum of the four angles.

Sum of the angles =

Sum of the angles =

5) Without using a protractor, calculate the size of each angle.
