

Instructions:

- 1) Cut and paste the steps in the correct order.
- 2) Draw pictures to match the steps involved in the formation of coal on Earth.

More and more layers of mud were deposited, pressing down on the plant matter.	Trees and plant matter died and fell into the swamp water millions of years ago.	Over time, heat and pressure slowly turn the mud into rock and the plant matter into coal.	Mud and swamp water washed over the plant matter, covering it and slowing its decay.
