

EVAPORATION & CONDENSATION

Name:

Date:

Aim:

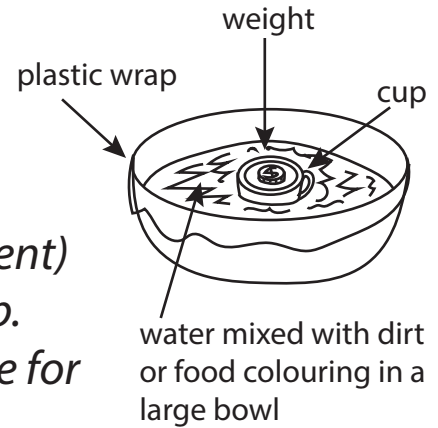

To explore the processes of evaporation and condensation and explain their roles in the water cycle.

Materials Needed:

Large bowl, cup, dirty water, plastic wrap, a weight

What to do:

- 1) Place dirty water in the bowl.
- 2) Place cup in the bowl.
- 3) Cover bowl with plastic wrap.
- 4) Place the weight (a coin or a pebble is sufficient) on top of the plastic film, directly above the cup.
- 5) Place the experiment in direct sunlight. Leave for a few hours. Observe periodically.

Results:

Conclusion:
